

Flower Instructions:

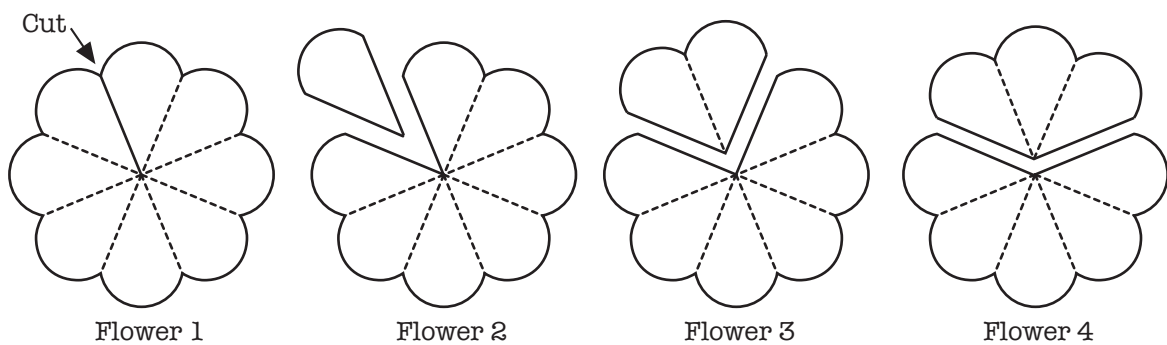

1. Using the flower template sheet enclosed, lay over the top of a sheet of coloured or patterned paper and cut round the flower shapes with scissors. You will need to cut out 4 flower shapes to make 1 complete 3d flower. (You may like to make your flower have multicoloured layers so cut out 4 different coloured flowers)

2. Fold each of your 4 flowers in between each petal (see the dotted line in the diagram below) in order to obtain the center.

3. Take one of the flowers and cut down to the side of one petal to the center point. (see flower 1 below). On the second flower remove one of the petals completely (see flower 2 below). On the 3rd flower remove two of the petals (see flower 3 below) keep the spare petals for later. On the final flower remove three of the petals (see flower 4 below) keep the spare petals for later.

4. Place glue onto one of the petals on each flower (shown shaded grey on the diagrams below) and glue one petal over the other forming a cone shape.
